Dear Human Resources Manager,

I am a undergraduate student studying Computer Science with Maths option in the University of Cambridge currently looking for a challenging summer internship to further develop my technique skill.

I am delighted to find that Improbable is a energetic software company with interesting and potential products. As an internship applicant I am happy with challenges and looking for experiencing the latest technology and software design trend. I had some industrial development experience in another software engineer internship during my senior high school summer holiday. It was an individual project with various aspects of programming: a tool which taking command and generate SQL Language to collect data from MySQL database, transferring them to excel sheet by .NET Framework and send them to a email workgroup. So I understand the technical difficulty I may face during the internship and how to effectively solve them via self-study, research or looking for help from experienced developer when necessary.

If you have any questions about the resume or CV please contact me by email. I am looking for your reply.

yours sincerely,

Zijun Yan
